

Pipe Dream™ Reference Card

IBM®

Getting Started

NOTE: *It is recommended that you first make a backup copy of your disk and put the original in a safe place. The disk is not copy-protected, so to make a copy, just follow the instructions that came with your computer.*

You can play from either a hard disk drive or a floppy disk drive.

From a floppy drive

① After booting, place the Pipe Dream backup disk in drive A, type **a:** and press **ENTER**.

② When you see the **A>** prompt, type: **pipe** and press **ENTER** to start the game.

③ Follow the instructions on the screen for set up procedures.

④ Follow the instructions in your manual for the secret code and game play procedures.

To install Pipe Dream on a hard disk, we have provided a utility that will automatically copy the program to your hard disk from the floppy included in the game.

① After booting, insert the Pipe Dream backup disk in drive A

② Type: **a:** and press **ENTER**.

③ When you see the **A>** prompt, type the word **install** followed by a space, the letter of your hard disk, a colon, and then press **ENTER** (For example if your hard disk is 'C', type: **install c:** and press **ENTER**).

This will install the game in a directory

called 'pipe' on your hard disk. To move the game just copy the files into a new directory.

To load the game from your hard disk use these commands:

① Switch to the correct drive (for example, type **c:** and press **ENTER**)

② **cd \pipe** (to change to the correct directory)

③ **pipe** (to start the game)

④ Follow the instructions on the screen for setup procedures.

⑤ Follow the instructions in your manual for the secret code and game play procedures.

Setting Preferences

When loaded, the program will select the best graphics mode for your machine. If you wish to choose a different mode, you may do so by adding the following letters (separated by a space) after **pipe** when you start the game:

m - MCGA **v** - VGA

c - CGA **e** - EGA

h - Hercules **t** - Tandy 16-color mode

For example, to start the game in CGA mode type: **pipe c**

NOTE: The program will not work correctly if you select a mode that your machine cannot support.

Follow the instructions on the screen to select your preference of input devices and playing mode. The 'save settings' option allows you to save the current settings to disk. These settings will be used as the default settings the next time you play the game.

Game Controls

One player basic

-move the joystick or mouse forward to move the cursor up one square.

-move the joystick or mouse backward to move the cursor down one square.

-move the joystick or mouse to the right to move the cursor to the right one square.

-move the joystick or mouse to the left to move the cursor to the left one square.

-pressing the joystick or left mouse button places the source piece that is waiting to be used in the square that the cursor is highlighting.

-if you are playing from the keyboard, you may use the default keyboard settings listed below or enter your own.

8 - moves up
